

ENVIRONMENTAL POLICY

The fight against climate change is one of the main challenges and must be a priority for the tourism industry. For this reason, at R2 Hotels we are committed to this issue and have set ourselves objectives to make it a reality.

Our objectives for 2022: to reduce our carbon emissions, water consumption and waste generation by 15%.

Measures we are implementing:

- Awareness signage for clients and staff on information screens.
- Low-consumption light bulbs installed throughout the entire property.
- Monitoring of water and energy consumption, detecting possible breakages and leaks.
- Regular training of our employees for greater awareness on this topic.
- Monthly monitoring audits by quality and Management to verify compliance with established measures.
- Occupancy control and room assignment per floor based on this.
- Waste control, through the purchasing and kitchen departments, supported by client and staff awareness.
- Good preventive maintenance of our equipment.
- Scheduled on/off times in line with daylight hours.
- Reduction of corporate travel, promoting online corporate meetings.

Minimising pollution caused by the operation of our business:

- New model appliances that do not harm the environment.
- Proper waste recycling and supervision thereof.
- Reducing chemical cleaning products, seeking more sustainable alternatives.
- General plastic reduction, seeking other alternatives.

Conservation:

- Support for local beach cleaning initiatives, preserving native fauna, native flora in the hotel gardens.

Our employees are trained and we seek awareness and involvement among suppliers and clients on this topic.

We communicate our actions through our information screens, client information folders, emails, staff meetings, and signage.

Quality Manager, 1 March 2026
